

# Terminal Area Forecast Summary

**Fiscal Years  
2002-2020**

April 2003

**U.S. Department of Transportation  
Federal Aviation Administration  
FAA-APO-03-2**

## Preface

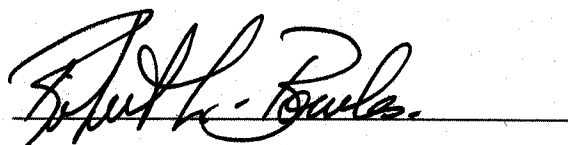

This publication provides aviation data users with summary historical and forecast statistics on passenger demand and aviation activity at U.S. airports. The summary level forecasts are based on individual airport projections. The forecasts include the impact of the terrorist events of September 11, 2001 and the recent weakness in the economy. However, the projections do not fully reflect the ongoing structural changes occurring within the aviation industry or the war in Iraq.

The Terminal Area Forecast (TAF) includes forecasts for active airports in the National Plan of Integrated Airport Systems (NPIAS). The Federal Aviation Administration's (FAA) Statistics and Forecast Branch, Office of Aviation Policy and Plans, develops the TAF. As its primary input, the TAF initially used the national forecasts of aviation activity contained in *FAA Aerospace Forecasts, Fiscal Years 2002-2013* (March 2002). The preliminary TAF forecasts were forwarded to the FAA regional offices for review in June 2002. However, by late summer it became apparent that passenger demand had weakened and, as a result, mainline air carriers began to implement significant schedule reductions throughout their route networks. Therefore, the preliminary TAF forecasts were revised in January/February 2003 to reflect the lower demand and activity levels at most airports. For the most part, the current TAF incorporates the forecasts and assumptions con-

tained in *FAA Aerospace Forecasts, Fiscal Years 2003-2014* (March 2003). The tables for the national forecasts can be found at <http://apo.faa.gov/pubs.asp>.

The TAF can be accessed from the Internet. Copies of the TAF model and TAF database are located at <http://www.apo.data.faa.gov/>. The TAF model allows users to create their own scenarios and forecasts. The TAF database, which contains a query data application, allows the public to access and print historical (1976 to 2001) and forecast (2002 to 2020) aviation activity data by individual airport, state, or FAA region.

The FAA welcomes public comment on the forecasts, as well as suggestions for improving the usefulness of the TAF.

Robert L. Bowles  
Manager, Statistics and Forecast Branch  
Office of Aviation Policy and Plans

# Acknowledgments

This document was prepared by the Statistics and Forecast Branch of the FAA Office of Aviation Policy and Plans. Daniel E. Taylor and Peter LeBoff have primary responsibility for the development of the forecasts. Robert L. Bowles, Manager, Statistics and Forecast Branch; Roger Schaufele, Charles Moles, and Cheryl Miner, industry economists, also contributed their valuable support.

The software support was executed under the direction of Carlton R. Wine, Manager, Information Systems Branch. Mr. Wine and his staff organize and manage the data bases used to produce the forecasts, update the computer programs, and carry out the computer operations necessary to produce the individual airport fore-

casts. We extend a special thanks to Philip Sperry and Damien G. Agostinelli who programmed the TAF software and made accessing and analyzing this airport data so much more efficient.

Special acknowledgments are made to FAA Regional and District Office staff, particularly Airports and Air Traffic personnel, for their assistance in coordinating the regional reviews, state input, and forecast recommendations. The reviews and comments of the regional offices were extremely important and useful in guiding the Statistics and Forecast Branch in making adjustments to the preliminary version of the forecasts. Undoubtedly, their effort has enhanced the accuracy and credibility of the final product.

# Summary Highlights for Fiscal Year 2001

- A total of 689.4 million passengers were enplaned at U.S. airports in 2001; FAA and Federal contract towered airports accounted for 685.2 million enplanements.
- The top 100 air carrier airports accounted for 651.2 million enplanements in 2001, or 94 percent of total enplanements at U.S. airports.
- FAA towers handled 50.6 million operations (takeoffs and landings) in 2001, including 23.8 million commercial aircraft operations.
- Towers operated under Federal contract by FAA handled 15.9 million operations in 2001, including 1.8 million commercial operations.
- The 32 large hub airports<sup>1</sup> enplaned 486.3 million passengers in 2001. These airports are projected to enplane 818.5 million passengers in 2020, a 68.3 percent increase over the 19-year period (or 2.8 percent annually).
- The 35 medium hub airports<sup>2</sup> recorded 128.5 million enplanements in 2001. These airports are projected to enplane 198.4 million passengers in 2020, a 54.4 percent increase over the 19-year period (or 2.3 percent annually).
- In terms of 2001 passenger enplanements, Atlanta (38.4 million enplanements), Chicago O'Hare (32.9 million), Los Angeles (31.5 million), Dallas/Ft. Worth (26.9 million), and Phoenix (18.1 million) were the five largest U.S. commercial airports, accounting for 21.4 percent of total enplanements at U.S. airports.
- Atlanta is projected to remain the country's busiest airport, as measured by passenger enplanements, through the forecast period with a projected 64.7 million enplaned passengers in 2020. Chicago O'Hare is projected to enplane 52.4 million passengers in 2020, followed by Los Angeles with 48.3 million enplanements.
- Enplanements at Cincinnati, Washington Dulles, and Chicago Midway airports are projected to grow fastest among large hub airports. The annual growth rates at these airports are forecasted to increase by 5.5, 4.7, and 4.4 percent per year, respectively, over the 2001 – 2020 period.
- In terms of total operations, Chicago O'Hare was the busiest U.S. airport in 2001 with 927,000 aircraft operations. Atlanta and Dallas/Ft. Worth were the second and third busiest airports with 898,000 and 835,000 operations, respectively.
- By 2020, Atlanta is expected to lead the nation in total operations with a projected 1.41 million operations. Dallas/Ft. Worth (1.22 million operations) is projected to move into second place with Chicago O'Hare (1.20 million operations) dropping to third position.

---

<sup>1</sup> Airports enplaning one percent or more of total enplanements.

<sup>2</sup> Airports enplaning 0.25 to 0.99 percent of total enplanements.

- The FAA's Southern region airports enplaned more passengers than any other region with 153.2 million passengers in 2001, or 22 percent of total enplanements. The Western Pacific region followed with 144.5 million enplanements, or 21 percent of total enplanements.
- The Southern region is expected to maintain its lead in passenger enplanements, reaching 257.2 million by 2020. The Western Pacific region is projected to remain in second place in 2020 with 230.2 million enplanements.
- The Southern region led all FAA regions in the number of aircraft operations with 26.3 million operations in 2001. This region is expected to continue to remain first in 2020 with 31.5 million operations. The Western Pacific and Great Lakes regions ran second and third in aircraft operations in 2001 with 20.7 million operations each. These two regions are projected to maintain their relative rankings in 2020.

# Forecast Process

## Introduction

The Terminal Area Forecast (TAF) contains historical and forecast data for enplanements, airport operations, instrument operations, and based aircraft. The data cover the 266 FAA towered airports, 208 Federal contract tower airports, 180 radar approach control facilities, and 2,895 non-FAA airports. Data in the TAF are presented on a U.S. Government fiscal year basis (October through September).

The TAF is available on the Internet. Copies of the TAF model and TAF database are located at <http://www.apo.data.faa.gov/>. The TAF model allows users to create their own scenarios and forecasts. The TAF database allows public access to historical and forecast aviation activity data by individual airport, state, or FAA region.

The TAF is prepared to assist the FAA in meeting its planning, budgeting, and staffing requirements. In addition, state aviation authorities and other aviation planners use the TAF as a basis for planning future airport improvements.

Data presented in the TAF show historical information from 1976 through 2001 and forecasts for 2002 to 2020.<sup>3</sup> The forecasts include the impact of the terrorist events of September 11, 2001 and the recent weakness in the economy. However, the projections do not fully reflect the ongoing structural changes occurring within the aviation industry or the war in Iraq.

---

<sup>3</sup> Operations data for FAA towers and Federal contract towers for 2002 are actual.

This document presents a set of summary tables on airport activity statistics. The airport activity data contained in the TAF consist of the following:

- ◆ *enplanements* (sum of originating and connecting) for air carriers and commuters;
- ◆ *itinerant operations* for air carriers, commuters and air taxis, general aviation (GA), and military;
- ◆ *local operations* for GA and military aircraft; and
- ◆ *total instrument operations* (primary and secondary).

Appendix A provides a detailed description of the activity data elements in the TAF. Appendix B provides a list of FAA airports by hub size and a list of FAA contract towers.

## Forecast Method

Aviation activity forecasts for FAA-towered and Federal contract towered airports are developed using historical relationships between airport passenger demand and/or activity measures and local and national factors that influence aviation activity. Each estimate is examined for its reasonableness and consistency by comparisons with historical trends of airport activity. If forecasts deviate from their expected trend, FAA employs other statistical techniques to reforecast the series. Other methods may include use of other functional forms and the use of growth rates developed separately from the TAF. The TAF may incorporate estimates prepared by local authorities and/or recent FAA-approved

airport master plan forecasts, when FAA forecast staff concludes that the methods used to develop these forecasts are acceptable.

In addition, the 41 commercial service airports in the large hub cities receive a more in-depth review by FAA economists. The analyses of these hub city airports include additional consideration for the effect of local economic variables (such as income, employment, etc.) and the growth of originating and connecting traffic as well as the price of flying to and from that airport. The hub forecasts also include assumptions regarding the seating capacity and load factors for aircraft operating out of the airport. The recent downturn in aviation activity necessitated increased efforts to develop the near-term forecasts for the large hub airports. These efforts included the use of airport authority statistics to estimate baseline passenger levels; the use of future Official Airline Guide (OAG) schedules to project near-term departures and seats; and the use of month-over-month trends in enplanements per departure to project near-term enplanement and activity levels.

The TAF assumes an unconstrained demand for aviation services based upon local and national economic conditions as well as conditions within the aviation industry as a whole. In other words, an airport's forecast is developed independent of the ability of the airport and the air traffic control system to furnish the capacity required to meet demand. However, if the airport historically functions under constrained conditions, the FAA forecast may reflect those constraints since they are embedded in historical data. In statistical terms, the relationships between economic growth data and data representing growth in aviation activity reflect those constraints.

Because military operations forecasts often have national security implications, the Department of Defense (DOD) provides only limited informa-

tion on future aviation activity. Hence, the TAF projects military activity at its present level except when FAA has specific knowledge of a change. For instance, DOD may announce a base closing or may shift an Air Force wing from one base to another.

For all FAA towers and non-FAA facilities with air carrier or commuter passenger service, the TAF corresponds to prevailing local and national trends. For non-FAA facilities, which rely solely on Form 5010 data for general aviation activity levels, operations levels are held constant unless otherwise specified by a local or regional official.

## Forecast Review Process

Initially, FAA headquarters staff and management review FAA and Federal contract tower airport forecasts. These preliminary estimates are then submitted to FAA regional and district offices for review. Suggested changes made by the FAA regional staff are reviewed and, if determined reasonable by APO staff economists, are incorporated into the TAF. Significant increases in commercial activity are normally incorporated into the TAF only where APO receives verifiable evidence of a firm commitment by an air carrier or commuter airline to initiate new service.

Summary statistics presented in the TAF differ marginally from the national totals contained in *FAA Aerospace Forecasts: Fiscal Years 2003-2014 (March 2003)*. Reasons for the minor differences are threefold. First, the TAF forecast methods rely, in part, upon an airport's historical national share of aviation activity, but also consider airport specific trends. In particular, large hub airport forecasts are based, in part, on the projected local economic activity and airport specific airline fares. Second, the TAF in-

cludes facilities not serviced by the FAA in its totals. These facilities make up a large share of the general aviation operations activity shown in the summary tables. Finally, individual forecasts are not scaled to force aggregates to equal national totals.

## **Data Sources**

The development of the TAF begins with an update of the latest historical passenger and aircraft activity, using information derived from several sources. FAA's National Flight Data Center provides general airport information such as the airport name, location, and location identifier. Airport operations and instrument (radar assisted) operations data for airports with FAA and Federal contract air traffic control services are reported by FAA air traffic and Federal contract tower staff. Operations at non-FAA airports are taken from FAA Form 5010 reports on aviation activity at the airport as estimated by

FAA inspectors or information provided by airport managers, state aviation activity surveys, and other sources.

U.S. domestic and international (U.S. and foreign flag carriers) enplanements are derived from the Department of Transportation's (DOT) T-3 and T-100 databases. Commuter enplanements are derived from DOT T-100 and 298-C data.

Based aircraft data are supplied by state aviation officials and reported on FAA Form 5010. These data show numbers of aircraft, mostly general aviation aircraft, permanently based at an airport.

The TAF contains actual historical operations data through fiscal year 2002 for FAA and Federal contract tower airports. Enplanement data for fiscal year 2002 are estimates. Appendix A contains a detailed description of each TAF data element.

# TAF and National Forecast Totals

## Events of September 11, 2001

The events of September 11, 2001 and its aftermath have left in its wake shock waves throughout the aviation industry. Commercial and general aviation demand and aircraft activity have been substantially reduced. The impact of these events and weakness in the economy can be assessed by comparing the 2015 forecast levels in the previous (2001) TAF with the 2015 forecast levels in this (2002) TAF. The 2015 forecast levels for enplanements at FAA and contract towers declined 14.4 percent from 1.1 billion to 969 million; the 2015 forecast levels for total operations at these airports declined 6.3 percent from 85.6 million to 80.2 million. The 2015 forecast level for enplanements at both towered and non-towered airports declined 14.3 percent from 1.1 billion to 974 million; the forecast level for total operations at all airports declined 3.4 percent from 145.4 million to 140.5 million. In effect, activity and passenger demand levels have been extended four to six years into the future; total operations are not expected to achieve the previous 2015 TAF forecast level until 2019 and enplanements are not expected to achieve the previous 2015 TAF forecast level until after 2020. The forecasts presented herein do not fully reflect the ongoing structural changes occurring within the aviation industry or the war in Iraq.

## National Forecast Trends

Trends at individual airports reflect to varying degrees national aviation trends as well as the dynamics occurring at individual airports. The

national forecasts contained in *FAA Aerospace Forecasts Fiscal Years 2003 – 2014 (March 2003)* show aircraft operations at FAA and Federal contract tower airports growing at an average annual rate of 1.7 percent over the 12-year forecast period. Average annual growth rates for this period by user group are as follows: air carrier, 2.2 percent; air taxi/commuter, 2.8 percent; and general aviation, 1.3 percent. The projected average annual rate of increase for enplanements on U.S. air carriers from the national forecast is 3.6 percent over the 12-year forecast period. Regional/commuter enplanements are projected to increase 5.6 percent annually.

## Data Summary and Comparisons

In fiscal year 2001, the FAA served 266 towers (levels 1 through 5) and 208 Federal contract towers. California had the most FAA towers with 33, followed by Texas with 19 and Florida with 18. Regions with the most FAA towers were Southern with 51 FAA towers and Western Pacific and Great Lakes, with 48 each. Table S-3 presents the number of FAA and Federal contract towers by region and state.

The 32 large hub airports enplaned 486.3 million passengers in 2001 while the 35 medium and 67 small hub airports enplaned 128.5 and 51.5 million passengers, respectively. The 340 non-hub airports enplaned 19.0 million passengers. Table S-5 presents passenger enplanements and airport operations by hub size. Appendix B contains a listing of hub airports classi-

fied by size (large, medium, small, and non-hub) as well as a list of Federal contract towers.

Operations at large hub airports totaled 15.2 million compared to levels of 7.9 and 8.4 million at medium and small hub airports, respectively.

Operations at large hub airports are forecast to increase 38 percent from 2001 to 2020, growing to 20.9 million. Operations at all FAA and Federal contract tower airports are projected to increase from 66.5 to 86.4 million, an increase of 30 percent.

Non-hub airports accounted for 35.0 million operations or 53 percent of total operations at FAA and Federal contract towers. General aviation aircraft operations accounted for the majority of operations at these smaller airports.

Tables S-6 through S-11 summarize airport operations, enplanements, and based aircraft by region from 1997 through 2020. The Southern (26.3 million operations), Western Pacific (20.7 million), and Great Lakes (20.7 million) regions ranked as the top three FAA regions in airport operations in 2001. Operations for all TAF airports totaled 124.4 million.

The Northwest Mountain and Western Pacific regions are projected to be the fastest growing FAA regions from 2001 to 2020 in terms of airport operations, increasing 24 percent and 22 percent, respectively. The Southern region led FAA regions in passengers enplaned with 153.2 million in 2001, followed by the Western Pacific region with 144.5 million passengers. Enplanements in the Great Lakes and Eastern regions are projected to increase the most in percentage terms over the forecast period, with each region increasing 70 percent.

In 2001, there was a total of 195.5 thousand based aircraft. Western Pacific (38.0 thousand aircraft), Southern (34.0 thousand), and Great Lakes (32.7 thousand) ranked as the top three FAA regions.

## Large, Medium, and Small Hubs

This section reports historical data and forecast aviation activity summaries for the nation's hub airports. An airport qualifies as a *large* hub with one percent or more of total U.S. passenger enplanements. A *medium* hub airport enplanes from 0.25 to 0.99 percent of total U.S. passenger enplanements while *small* and *non*-hub airports enplane from 0.05 to 0.249 percent and less than 0.05 percent, respectively.

Table S-5 shows enplanements and operations for FAA towered airports by hub size. Enplanements at large hubs are expected to increase at an annual rate of 2.8 percent over the 2001 to 2020 forecast period. Medium and small hub airports are forecast to increase 2.3 percent and 2.0 percent annually, respectively, during the forecast period.

## Forecasts

Table S-1 presents enplanement forecast summaries for large hub airports. Atlanta was the busiest airport in 2001 (38.4 million enplanements), followed by Chicago O'Hare (32.9 million), Los Angeles (31.5 million), and Dallas/Ft. Worth (26.9 million). Atlanta and Dallas/Ft. Worth are forecasted to have the strongest growth in enplanements among the top four airports, increasing at annual rates of 2.8 percent and 2.6 percent, respectively, over the 2001 to 2020 forecast period. Chicago O'Hare is fore-

cast to increase at an annual rate of 2.5 percent and Los Angeles at 2.3 percent. Graph S-1 shows relative enplanements growth over the next 19 years. The five airports with the fastest projected increase are Cincinnati, Washington Dulles, Chicago Midway, Ft. Lauderdale, and John F. Kennedy.

Cincinnati, Washington Dulles, and John F. Kennedy are projected to make the largest upward movement in ranking of enplanements. Cincinnati moves up from 26<sup>th</sup> to 13<sup>th</sup>, Washington Dulles moves from 27<sup>th</sup> to 18<sup>th</sup>, and John F. Kennedy moves up from 14<sup>th</sup> to 8<sup>th</sup> position. Hub airports with the largest drop in hub rankings are San Francisco (from 7<sup>th</sup> to 15<sup>th</sup>) and La Guardia (from 19<sup>th</sup> to 27<sup>th</sup>).

Table S-2 presents operations forecast summaries for the 32 large hub airports. In 2001, FAA controllers at Chicago O'Hare handled 927,000 landings and takeoffs, a workload slightly higher than Atlanta, which totaled 898,000 operations. The next busiest airports were Dallas/Ft. Worth and Los Angeles with 835,000 and 783,000 airport operations, respectively.

In 2020, Atlanta is projected to have the largest number of operations with 1.41 million followed by Dallas/Ft. Worth with 1.22 million. Operations at Chicago O'Hare are forecast to increase relatively slowly dropping O'Hare to 3<sup>rd</sup> place by 2020.

Graph S-2 shows that the three airports projected to grow the fastest in operations are Cincinnati, Chicago Midway, and Washington Dulles. Cincinnati and Bush Intercontinental are expected to move into the list of the top 10 busiest airports replacing Las Vegas and Boston.

The 35 medium hubs enplaned 128.5 million passengers in 2001. Enplanements at these airports are forecast to increase by 54 percent over the forecast period. At the 67 small hubs, enplanements are projected to grow by 45 percent.

Operations at the medium hubs are forecast to rise by 33 percent from 2001 to 2020; aircraft operations at small hub airports are forecast to grow only 21 percent.

\*Includes both tower and non-tower airports.

# Appendix A

## Description of Activity Measures

### **Air Carrier Enplanements**

These data summarize domestic enplaned passengers (originations and connections) of U.S. commercial air carriers and international enplanements for both U.S. and foreign flag carriers submitted to the U.S. Department of Transportation (DOT), Bureau of Transportation Statistics (BTS) on Form 41, T-100 reports. Estimates include both scheduled and non-scheduled enplaned passengers.

### **Commuter Passengers**

These data include originating passengers on scheduled commuter or regional carriers as reported on DOT Form 41 and 298-C. Carriers reporting on Form 298-C operate at least five scheduled round trips per week and its entire fleet consists of aircraft with 60 or fewer seats. Where possible, adjustments have been made to include connecting passengers.

FAA includes in the commuter category enplanements for those regional carriers that report on Form 41 as an air carrier but fly primarily commuter aircraft. The adjustment removes these enplanements from the air carrier category and places them into the commuter category. These carriers operate primarily as regional commuter carriers although they fly a small number of larger air carrier aircraft.

### **Aircraft Operations**

FAA air traffic controllers count landings and takeoffs at FAA towered airports. Controllers employed by an FAA contractor count operations at FAA contract towers. At non-FAA facilities, operations counts represent an estimate.

Air carrier operations represent either takeoffs or landings of commercial aircraft with seating capacity of more than 60 seats.

Commuter operations include takeoffs and landings by aircraft with 60 or fewer seats conducting scheduled commercial flights. Air taxi operations include takeoffs and landings by aircraft with 60 or fewer seats conducted on non-scheduled or for-hire flights.

General aviation operations represent all civil aviation aircraft takeoffs and landings not classified as commercial or military. Military operations represent takeoffs and landings by military aircraft. GA and military operations are further subdivided into itinerant or local flights.

### *Local Operations*

Aircraft operating in the traffic pattern or within sight of the tower, or aircraft known to be departing or arriving from flight in local practice areas, or aircraft executing practice instrument approaches at the airport.

### *Itinerant Operations*

FAA reports all aircraft operations other than local operations as itinerant. Essentially, these data represent takeoffs and landings of aircraft going from one airport to another.

### **Instrument Operations**

These data include arrivals, departures, and overflights conducted by an FAA approach control facility for aircraft with an Instrument Flight Rule (IFR) flight plan or special Visual Flight Rule procedures. They also contain operations where a terminal control facility provides IFR aircraft separation. The FAA classifies these operations into the following three types.

### *Primary Instrument Operations*

These data consist of aircraft arrivals and departures at a primary airport, normally the airport with the approach control facility.

### *Secondary Instrument Operations*

These data show arrivals and departures at secondary airports.

### *Overflights*

These data include operations of aircraft in transit through the approach control facility airspace.
