

Federal Aviation
Administration

Terminal Area Forecast Summary

Fiscal Years 2011 - 2040

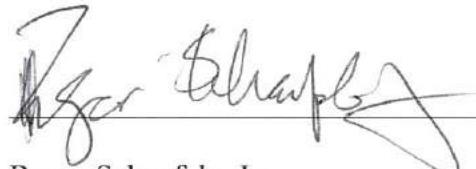

Preface

This publication provides aviation data users with summary historical and forecast statistics on passenger demand and aviation activity at U.S. airports. The summary level forecasts are based on individual airport projections.

The Terminal Area Forecast (TAF) includes forecasts for active airports in the National Plan of Integrated Airport Systems (NPIAS). The Federal Aviation Administration's (FAA) Forecast and Performance Analysis Division, Office of Aviation Policy and Plans, develops the TAF. As its primary input, the TAF initially used the national forecasts of aviation activity contained in *FAA Aerospace Forecasts, Fiscal Years 2011-2031*. The final TAF considers the forecasts and assumptions contained in *FAA Aerospace Forecasts, Fiscal Years 2012-2032*. The tables for the national forecasts will be available at http://www.faa.gov/data_statistics/aviation/aerospace_forecasts/2012-2032/ after March 9, 2012.

The TAF can be accessed from the Internet. The TAF model and TAF database are located at <http://aspm.faa.gov/>. The TAF model allows users to create their own forecast scenarios. It contains a query data application that allows the public to access and print historical (1990 to 2010) and forecast (2011 to 2040) aviation activity data by individual airport, state, or FAA region.

The FAA welcomes public comment on the forecasts, as well as suggestions for improving the usefulness of the TAF.

Roger Schaufele, Jr.

Manager

Forecast and Performance Analysis Division
Office of Aviation Policy and Plans

Acknowledgments

This document was prepared by the Forecast and Performance Analysis Division of the FAA Office of Aviation Policy and Plans under the direction of Roger Schaufele, Manager, Forecast and Performance Analysis Division. Peter LeBoff, Jerry Davis, and Katherine Lizotte had primary responsibility for the development of the forecasts. Anna Barlett, Cheryl Miner, Dipasis Bhadra, and Nick Miller also contributed their valuable support in the development of forecasts for the Core airports.

The software support was provided under contract by IT WORKS! Software. We extend a special thanks to Alice Dobrin and Damien Agostinelli whose invaluable

programming support for the TAF software made accessing and analyzing this airport data so much more efficient.

Special acknowledgments are made to FAA Airports staff in the Regional and Airport District Offices for their assistance in coordinating the regional reviews, state input, and forecast recommendations. The reviews and comments of the regional offices were extremely important and useful in guiding the Forecast and Performance Analysis Division in making adjustments to the preliminary version of the forecasts. Their efforts have enhanced the accuracy and credibility of the final product.

Summary Historical and Forecast Highlights

- A total of 701.9 million passengers were enplaned at U.S. airports in 2010; FAA and Federal contract towered airports accounted for 697.8 million enplanements.
- The top 100 air carrier airports accounted for 661.2 million enplanements in 2010, or 95 percent of total U.S. enplanements.
- FAA towers handled 37.3 million operations (takeoffs and landings) in 2010, including 20.4 million commercial aircraft operations.
- FAA contract towers handled 14.1 million operations in 2010, including 1.7 million commercial operations.
- The Core airports enplaned 495.1 million passengers in 2010. These airports are projected to enplane 1.1 billion passengers in 2040, a 118.4 percent increase over the forecast period (or 2.6 percent annually).
- The 29 large hub airports¹ enplaned 490.2 million passengers in 2010. These airports are projected to enplane 1.1 billion passengers in 2040, a 119.0 percent increase over the 30-year period (or 2.6 percent annually).
- The 36 medium hub airports² recorded 131.4 million enplanements in 2010. These airports are projected to enplane 252.0 million passengers in 2040, a 91.8 percent increase over the 30-year period (or 2.2 percent annually).
- Atlanta (42.5 million enplanements), Chicago O'Hare (31.9 million), Los Angeles (28.4 million), Dallas/Ft.Worth (26.7 million), and Denver (24.8 million) led U.S. commercial airports in passenger enplanements, accounting for 22.0 percent of enplanements at U.S. airports.
- Atlanta is projected to remain the country's busiest airport, as measured by passenger enplanements, through the forecast period with a projected 94.3 million enplaned passengers in 2040. Chicago O'Hare is projected to enplane 69.8 million passengers in 2040, followed by Los Angeles with 60.2 million enplanements.
- Enplanements at Houston Intercontinental, Washington Dulles, and John F. Kennedy airports are projected to grow fastest among the Core airports. The annual growth rates at these airports are forecast to increase by 4.1, 3.9, and 3.6 percent per year, respectively, over the forecast period.
- In terms of total operations, Atlanta was the busiest U.S. airport in 2010 with 957,000 aircraft operations. Chicago O'Hare and Dallas/Ft. Worth were the second and third busiest airports with 868,000 and 650,000 operations, respectively.
- In 2040, Atlanta is expected to remain the busiest airport in the nation, as measured by total operations, with a projected 1.72 million operations. Chicago O'Hare

¹ Airports enplaning one percent or more of total enplanements.

² Airports enplaning 0.25 to 0.99 percent of total enplanements.

(1.68 million operations) is projected to stay in second place. Houston Intercontinental (1.38 million operations) is projected to move into third place and Denver (1.12 million operations) is projected to remain in fourth place.

- The FAA's Southern region airports enplaned more passengers than any other region with 162.7 million passengers in 2010, or 23 percent of U.S. enplanements. The Western Pacific region was second with 140.4 million enplanements, or 20 percent of the total.
- The Southern region is expected to lead in passenger enplanements in 2040, reaching 357.8 million. The Western Pacific region is projected to stay in se-

cond place with 288.8 million enplane-
ments.

- The Southern region led all FAA regions in the number of airport operations with 22.4 million in 2010. The Southern re-
gion is expected to remain first in 2040
with 28.2 million operations. The West-
ern Pacific and Great Lakes regions ran
second and third in airport operations in
2010 with 16.5 and 16.3 million, respec-
tively. In 2040, the Western Pacific re-
gion is projected to remain in second
place with 19.9 million operations and the
Great Lakes region is projected to remain
in third place with 19.3 million opera-
tions.

Forecast Process

Introduction

The Terminal Area Forecast (TAF) contains historical and forecast data for enplanements, airport operations, tracon operations, and based aircraft. The data cover the 264 FAA towered airports, 248 Federal contract tower airports, 31 terminal radar approach control facilities, and 2,824 non-FAA airports as of September 30, 2010. Data in the TAF are presented on a U.S. Government fiscal year basis (October through September).

The TAF is available on the Internet. The TAF model and TAF database are located at <http://aspm.faa.gov/>. The TAF model allows users to create their own forecast scenarios. The TAF database allows public access to historical and forecast aviation activity data by individual airport, state, or FAA region. In addition, links to the TAF from previous years are available via the address noted above.

The TAF is prepared to assist the FAA in meeting its planning, budgeting, and staffing requirements. In addition, state aviation authorities and other aviation planners use the TAF as a basis for planning airport improvements.

This document presents a set of summary tables on airport activity statistics. The airport activity data contained in the TAF consist of the following:

- ◆ *enplanements (sum of originating and connecting passengers)* for air carriers and regionals;

- ◆ *itinerant operations* for air carriers, commuters and air taxis, general aviation (GA), and military aircraft;
- ◆ *local operations* for civil and military aircraft; and
- ◆ *tracon operations* for aircraft operations under radar control.

Data on operations presented in the TAF show historical information from 1990 through 2010 and forecasts for 2011 to 2040.³ The historical enplanement information in the TAF model are from 1976 through 2010 and the 2011 figures represent estimates. The enplanement forecasts are from 2012 to 2040. Appendix A provides a detailed description of the activity data elements in the TAF. Appendix B provides a list of FAA airports by hub size and a list of FAA contract towers.

Forecast Method

The TAF assumes a demand driven forecast for aviation services based upon local and national economic conditions as well as conditions within the aviation industry. In other words, an airport's forecast is developed independent of the ability of the airport and the air traffic control system to furnish the capacity required to meet demand. However, if the airport historically functions under constrained conditions, the FAA forecast may reflect those constraints since they are embedded in historical data. In statistical terms, the relationships between economic growth data and data representing growth in aviation activity reflect those constraints.

³ Operations data for FAA towers and Federal contract towers for 2011 are actual.

Aviation activity forecasts for FAA-towered and Federal contract towered airports are developed using historical relationships between airport passenger demand and/or activity measures and local and national factors that influence aviation activity. Each estimate is examined for its reasonableness and consistency by comparisons with historical trends of airport activity. If forecasts deviate from their expected trend, FAA uses other statistical techniques to reforecast the series. Other methods may include use of regression analysis and the use of growth rates developed separately from the TAF. The TAF may incorporate estimates prepared by local authorities and/or recent FAA-approved airport master plan forecasts, when FAA staff concludes that the methods used to develop these forecasts are acceptable.

In addition, the Core airports received a more in-depth review by FAA economists. The analyses of these hub city airports include additional consideration for the effect of local economic variables (such as income and employment) and the growth of originating and connecting traffic as well as the price of flying from that airport. The hub forecasts also include assumptions regarding the seating capacity and load factors for commercial aircraft operating out of the airport. The volatility in aviation activity necessitated increased efforts to develop the near-term forecasts for the Core airports. These efforts included the use of airport authority statistics to estimate baseline passenger levels; the use of future airline schedules to project near-term departures and seats; and the use of month-over-month trends in enplanements per departure to project near-term enplanement and activity levels.

Because military operations forecasts have national security implications, the Department of Defense (DOD) provides only lim-

ited information on future aviation activity. Hence, the TAF projects military activity at its present level except when FAA has specific knowledge of a change. For instance, DOD may announce a base closing or may shift an Air Force wing from one base to another.

For all FAA and Federal contract towered airports and non-FAA facilities with passenger service, the TAF corresponds to prevailing local and national trends. For non-FAA facilities, which rely solely on Form 5010 data for aviation activity levels, operations levels are held constant unless otherwise specified by a local or regional FAA official.

Forecast Review Process

Initially, FAA headquarters staff and management review FAA and Federal contract tower airport forecasts. These preliminary estimates are then submitted to FAA regional and district offices for review. Suggested changes made by the FAA regional staff are reviewed and, if determined reasonable by APO staff economists, are incorporated into the TAF. Significant increases in commercial activity forecasts are normally incorporated into the TAF only where APO receives verifiable evidence of a firm commitment by an air carrier or regional airline to initiate new service.

Summary statistics presented in the TAF differ from the national totals contained in *FAA Aerospace Forecasts, Fiscal Years 2012-2032*. Reasons for the differences are three-fold. First, the TAF forecast methods consider airport specific trends. In particular, Core airport forecasts are based, in part, on the projected local economic activity and airport specific airline fares. Second, the TAF and national forecast measurements vary. For

example, the TAF includes facilities not serviced by the FAA in its totals. These facilities make up a large share of the general aviation operations activity shown in the summary tables. Finally, individual forecasts are not scaled to force aggregates to equal national totals.

Data Sources

The development of the TAF begins with an update of the latest historical enplanement, operation, and based aircraft statistics, using information derived from several sources. FAA's National Flight Data Center provides general airport information such as the airport name, location, and location identifier. Airport operations and tracon (radar assisted) operations data for airports with FAA and Federal contract air traffic control services

are reported by FAA air traffic and Federal contract tower staff. Operations at non-FAA airports are taken from FAA Form 5010 reports on aviation activity at the airport as estimated by FAA inspectors or information provided by airport managers, state aviation activity surveys, and other sources.

U.S. domestic and international (U.S. and foreign flag carriers) enplanements are derived from the Department of Transportation's T-100 database. Regional carrier enplanements are derived from DOT T-100 and 298-C data.⁴

Based aircraft data are collected by FAA inspectors, airport managers, and state aviation officials and reported on FAA Form 5010. These data show numbers of aircraft, mostly general aviation aircraft, permanently based at an airport.

⁴ In October 2002, DOT began collecting data for all airlines using the T-100 format. This change provides more detail on regional airlines, who previously reported on Form 298-C.

TAF and National Forecast Totals

Near-Term Forecasts

In 2011 actual total operations at FAA and contract towers declined 1.4 percent; commercial operations increased 0.2 percent whereas non-commercial operations decreased 2.6 percent. Total enplanements were estimated to increase 2.1 percent in 2011.

In 2012 total operations at towers are forecast to decline 1.0 percent. This forecast decline in total operations at FAA and contract towers is primarily attributable to a forecast decrease of 1.9 percent in general aviation activity (itinerant general aviation plus local civil). Total enplanements are forecast to increase 0.3 percent in 2012.

National Forecast Trends

Trends at individual airports reflect to varying degrees national aviation trends as well as the dynamics at individual airports. The national forecasts for FAA towered airports reflected in *FAA Aerospace Forecasts, Fiscal Years 2012 – 2032* show aircraft operations growing at an average annual rate of 1.2 percent over the 21-year forecast period. Average annual growth rates for this period by user group are as follows: air carrier, 2.0 percent; air taxi/commuter, 1.6 percent; itinerant general aviation, 0.2 percent; and local civil 0.3 percent. The projected average annual rate of increase for enplanements on U.S. mainline and regional carriers from the national forecast is 2.5 percent over the 21-year forecast period.

Trends by Region

In fiscal year 2010, the FAA served 264 towers and 248 Federal contract towers. California had the most FAA towers with 33, followed by Texas with 19 and Florida with 18. Regions with the most FAA towers were Southern with 51, Great Lakes with 48, and Western Pacific with 46. Table S-3 presents the number of FAA and Federal contract towers by region and state.

Tables S-6 through S-11 summarize airport operations, tracon operations, enplanements, and based aircraft by region from 2006 through 2040. The Southern (22.4 million operations), Western Pacific (16.5 million), and Great Lakes (16.3 million) regions ranked as the top three FAA regions in airport operations in 2010. Operations for all TAF airports totaled 101.5 million. The Northwest Mountain and Eastern regions are projected to be the fastest growing FAA regions from 2010 to 2040 in terms of airport operations, increasing 38 percent and 28 percent, respectively.

The Southern region led FAA regions in passengers enplaned with 162.7 million in 2010, followed by the Western Pacific region with 140.4 million passengers. Enplanements in the Southern region are projected to increase the most in percentage terms increasing 121 percent from 2010 to 2040. The next two regions with the fastest projected increase in enplanements are Southern (120 percent) and Eastern (117 percent).

In 2010, there was a national total of 165,900 based aircraft. Southern (30,900 aircraft),

Western Pacific (29,300), and Great Lakes (27,600) ranked as the top three FAA regions.

Large, Medium, and Small Hubs

Table S-5 presents passenger enplanements and airport operations by hub size. An airport qualifies as a *large* hub with one percent or more of total U.S. passenger enplanements. A *medium* hub airport enplanes from 0.25 to 0.99 percent of total U.S. passenger enplanements while *small* and *non-hub* airports enplane from 0.05 to 0.249 percent and less than 0.05 percent, respectively. Appendix B contains a list of hub airports classified by size (large, medium, small, and non-hub) as well as a list of Federal contract towers.

The 29 large hub airports enplaned 490.2 million passengers in 2010 while the 36 medium and 76 small hub airports enplaned 131.4 and 58.9 million passengers, respectively. The 372 non-hub airports enplaned 17.3 million passengers. Enplanements at large hubs are expected to increase at an annual rate of 2.6 percent over the 2010 to 2040 forecast period. Medium and small hub airports are forecast to increase 2.2 percent and 2.1 percent annually, respectively, during the forecast period.

Operations at large hub airports totaled 12.4 million compared to 5.8 million and 7.1 million at medium and small hub airports, respectively. Operations at large hub airports are forecast to increase at an annual rate of 2.0 percent from 2010 to 2040, growing to 22.1 million. Operations at the medium hubs are forecast to rise at an annual rate of 1.4 percent from 2010 to 2040; aircraft operations at small hub airports are forecast to grow 0.7 percent per year.

Non-hub airports accounted for 26.1 million operations or 51 percent of total operations at FAA and Federal contract towers. General aviation aircraft operations accounted for the majority of operations at these smaller airports.

Core Airports

Table S-1 presents enplanement forecast summaries for the Core airports. Atlanta was the busiest airport in 2010 (42.5 million enplanements), followed by Chicago O'Hare (31.9 million), Los Angeles (28.4 million), and Dallas/Ft. Worth (26.7 million). Atlanta and Chicago O'Hare are forecast to have the strongest growth in enplanements among the top four airports, increasing at annual rates of 2.7 percent and 2.6 percent, respectively, over the 2010 to 2040 forecast period. Los Angeles and Dallas/Ft. Worth are forecast to increase 2.5 percent and 2.1 percent, respectively. Graph S-1 shows relative enplanements growth over the next 30 years. The five airports with the fastest projected increase are Houston Intercontinental, Washington Dulles, John F. Kennedy, Orlando, and Las Vegas.

Washington Dulles is projected to make the largest upward movement in ranking of enplanements, going from 21st to 14th. LaGuardia is projected to make the largest drop in rankings, going from 20th to 27th.

Table S-2 presents operations forecast summaries for the Core airports. In 2010, FAA controllers at Atlanta handled 957,000 landings and takeoffs, followed by Chicago O'Hare, which totaled 868,000 operations. The next busiest airports were Dallas/Ft. Worth and Denver with 650,000 and 626,000 airport operations, respectively.

In 2040, Atlanta is projected to have the largest number of operations with 1.72 million followed by Chicago O'Hare with 1.68 million. Houston Intercontinental is projected to move into 3rd place in 2040 with 1.38 million operations and Denver is projected to remain in 4th place with 1.12 million operations.

Graph S-2 shows that the three airports projected to grow the fastest in operations are Orlando, Houston Intercontinental, and John F. Kennedy. John F. Kennedy and Washington Dulles are expected to move into the list of the top 10 busiest airports; Philadelphia and Phoenix are expected to drop out of the top 10 ranking.

*Includes both tower and non-tower airports.

Appendix A

Description of Activity Measures

Air Carrier Enplanements

These data summarize domestic enplaned passengers (originations and connections) of U.S. commercial air carriers and international enplanements for both U.S. and foreign flag carriers submitted to the U.S. Department of Transportation (DOT), Bureau of Transportation Statistics (BTS) on T-100 reports. Estimates include both scheduled and non-scheduled enplaned passengers.

Regional Enplanements

Starting in FY 2003, FAA includes in the regional category enplanements for those airlines whose primary function is to provide passenger feed to mainline carriers, regardless of aircraft size. As of October 2002, all scheduled and non-scheduled operations using aircraft with 10 or more seats to transport regional passengers must report on T-100.

Historic enplanement data includes originating passengers on scheduled commuter or regional carriers as reported on DOT Form 41 and 298-C; where possible, adjustments were made to include connecting passengers. Historically, Form 298-C included carriers operating at least five scheduled round trips per week whose entire fleet consists of aircraft having 60 seats or less.

Aircraft Operations

FAA air traffic controllers count landings and takeoffs at FAA towered airports. Controllers employed by an FAA contractor count operations at FAA contract towers. At non-FAA facilities, operations counts represent an estimate.

Air carrier operations represent either takeoffs or landings of commercial aircraft with seating capacity of more than 60 seats.

Commuter/air taxi operations is one category. Commuter operations include takeoffs and landings by aircraft with 60 or fewer seats that transport regional passengers on scheduled commercial flights. Air taxi operations include takeoffs and landings by aircraft with 60 or fewer seats conducted on non-scheduled or for-hire flights.

Itinerant general aviation and local civil operations represent all civil aviation aircraft takeoffs and landings not classified as commercial. Military operations represent takeoffs and landings by military aircraft. Operations are either itinerant or local flights.

Local Operations

Aircraft operating in the traffic pattern or within sight of the tower, or aircraft known

to be departing or arriving from flight in local practice areas, or aircraft executing practice instrument approaches at the airport.

Itinerant Operations

FAA reports all aircraft operations other than local operations as itinerant. Essentially, these data represent takeoffs and landings of aircraft going from one airport to another.

Tracon Operations

These data include arrivals, departures, and overflights conducted by an FAA radar approach control facility for aircraft under Instrument Flight Rule (IFR) or Visual Flight Rule (VFR) plans.

Overflights

These data include operations of aircraft in transit through the approach control facility airspace.
