## FOREWORD

This *Index* contains a comprehensive listing of international publications in clinical aerospace medicine, operational aerospace medicine, aerospace physiology, environmental medicine/physiology, diving medicine/physiology, aerospace human factors, as well as other important topics directly- or indirectly-related to aerospace medicine.

This bibliographic index is divided into six major sections: I) Open Publications in General Aerospace Medicine, II) Government Publications in General Aerospace Medicine, III) Publications in other Topics Related to Aerospace Medicine, IV) Proceedings from Scientific Meetings, Conferences, and Symposiums in Aerospace Medicine, V) Journals, Newsletters, and Bulletins in Aerospace Medicine, and VI) Online Computerized Databases Containing Bibliographic Information in Aerospace Medicine and Related Disciplines.

With respect to the types of publications included in this bibliographic index, our primary objective is to provide the reader with detailed information about *books*. Books were selected because they offer a comprehensive coverage of a general area of interest, and represent excellent tools for structured learning and consultation.

On the other hand, article citations from periodical publications (journals, bulletins, and newsletters) were kept to a minimum because their coverage is usually limited to very specific issues. Articles are very useful to colleagues who have an adequate understanding of a given general discipline and wish to keep up with the latest developments in the various areas that conform such a discipline.

However, the inclusion of individual article citations (thousands of them) was beyond the scope of this bibliographic index. For those colleagues interested in periodical publications, our index includes a section containing general information on journals, bulletins, and newsletters in Aerospace Medicine; indicating which are currently being published on a regular basis and which have been discontinued.

We believe this index will be useful as a primary source of consultation for bibliographic information; especially to those colleagues who are in their formative years, and to those who do not have easy access to computer-aided literature search systems.

It is important to establish that this bibliographic index does not constitute a recommendation or an endorsement of any of the publications listed herein. The merits and limitations of each publication should be judged by the reader, keeping in mind that some of these publications should be evaluated as historical documents and not as up-to-date consultation sources.

Finally, this index is not intended to be an all-inclusive listing of every publication in aerospace medicine available worldwide. Because of limitations in our literature search methodologies, there are other publications of which we are not aware. Therefore, we take this opportunity to encourage readers to let us know of any publication not listed in this index that should be included in future updates. Please contact us at this address:
