

# Annual Review

## U. S. General Aviation Accidents

occurring in calendar year 1968

**NATIONAL TRANSPORTATION SAFETY BOARD**

**Department of Transportation**

**Washington, D.C. 20591**

## FOREWORD

The Statistical Review of General Aviation Accidents is published annually by the National Transportation Safety Board. This publication contains statistical information compiled from reports of 4,968 General Aviation accidents that occurred during the calendar year 1968.

In the analysis of accidents a collision between aircraft is treated as one accident in the overall total. However, a complete analysis and coding is made on each aircraft involved in a collision. This produces two aircraft accident records, one for each aircraft. These records contain the same broad categories of coded data, however, the specific entries, such as type of aircraft, kind of flying, phase of operation, etc., may or may not be common to each aircraft. As a result, the number of accidents may differ in the various tables depending upon whether or not collisions are involved and if so, whether or not the selected items of data are common to each aircraft. For example: In a table showing the number of accidents occurring in the various kinds of flying, if each of the colliding aircraft were conducting Pleasure Flying, one accident would appear in the Pleasure Flying column. However, if one aircraft was engaged in Pleasure Flying and the other was conducting Dual Instruction, the accident would appear twice, once in the Pleasure Flying column, and once in the Dual Instruction column.

Included in the total number of accidents are 63 collisions between aircraft. By coding each aircraft involved in the collisions an additional 63 records are produced, bringing the total accident records to 5,031. This figure reflects the true number of pilots and aircraft involved in the 4,968 accidents.

September 1969

EXPLANATORY NOTES

AIRCRAFT ACCIDENT (con't)

characteristics of the aircraft, and which would normally require major repair or replacement of the affected component.

(2) Engine failure, damage limited to an engine, bent fairings or cowling, dented skin, small punctured holes in the skin or fabric, ground damage to rotor or propeller blades, damage to landing gear, wheels, tires, flaps, engine accessories, brakes, or wingtips are not considered "substantial damage" for this part.

PHASE

The p  
opera

KIND

Refer  
time

INJURY INDEX

Injury index refers to the highest degree of personal injury sustained as a result of the accident.

TYPE OF ACCIDENT

Type of accident relates to the immediate circumstances of the occurrence. Many accidents involve a series of circumstances and therefore require a second type to more fully describe the sequence of events. Table 36 shows the relationship of first and second accident types. Some examples of types of accidents are as follows:

Gear Collapsed

Collapse of the landing gear due to mechanical failure other than a malfunction of the retracting mechanism.

Gear Retracted

Retraction of the landing gear due to malfunction or failure of the retracting mechanism or to inadvertent retraction by the crew. Excludes intentional gear retraction and wheels-up landing.

Airframe Failure

Occurrences resulting from failure of any part of the airframe while in flight or in motion on the ground. Excludes failure resulting from contact with another airplane or object, or impact with the ground, or damage from landing gear collapse or retraction.

Engine Failure/Malfunction

Occurrences of engine failure or malfunction for any reason. Includes engine stoppage, power interruption or power loss.

## EXPLANATORY NOTES

### PHASE OF OPERATION

The phase of operation relates to the particular segment of the flight or operation during which the circumstances of the accident occur.

### KIND OF FLYING

Refers to the purpose for which the aircraft is being operated at the time of the accident. There are four broad categories of kind of flying.

1. Instructional Flying

Refers to flying accomplished in supervised training under the direction of an accredited instructor.

2. Noncommercial Flying

Refers to the use of an aircraft for purposes of pleasure, personal transportation or in connection with a private business, in corporate/executive operations, and in other operations, wherein there is no direct monetary fee charged. It includes the following categories:

Pleasure

Flying by individuals in their own or rented aircraft for pleasure, or personal transportation not in furtherance of their occupation or company business.

Business

The use of aircraft by pilots (not receiving direct salary or compensation for piloting) in connection with their occupation or in the furtherance of a private business.

Corporate/Executive Operations

The use of aircraft owned or leased, and operated by a corporation or business firm for the transportation of personnel or cargo in furtherance of the corporation's or firm's business, and which are flown by professional pilots receiving a direct salary or compensation for piloting.

3. Commercial Flying

Commercial flying includes all general aviation flying normally conducted for direct financial return, except instructional flying. It includes air taxi operations, aerial application, fire control, aerial mapping or photography, aerial advertising, power/pipeline patrol and fish spotting.

## EXPLANATORY NOTES

### GENERAL AVIATION

General Aviation refers to the operation of U. S. Civil Aircraft owned and operated by persons, corporations, etc., other than those engaged in air carrier operations authorized by a certificate of public convenience and necessity, issued by the Civil Aeronautics Board.

### AIRCRAFT ACCIDENT

The accidents included herein are the occurrences incident to flight in which, "as a result of the operation of an aircraft, any person (occupant or nonoccupant) receives fatal or serious injury or any aircraft receives substantial damage." The total number of accidents shown in this publication should not be compared with the total number of accidents for any year prior to 1968. This is because of the effect of an amendment to Section 430.2 of Part 430 of the National Transportation Safety Board's Regulations, effective January 1, 1968. The change which influenced the decrease in the number of total accidents was to "substantial damage" to aircraft of 12,500 pounds maximum certificated takeoff weight or less, as follows:

Prior to January 1, 1968, the definition of substantial damage was:

- (1) Except as provided in subparagraph (2) of this paragraph:
  - (i) Substantial damage in aircraft of 12,500 pounds maximum certificated takeoff weight or less means damage or structural failure reasonably estimated to cost \$300 or more to repair.
  - (ii) Substantial damage in aircraft of more than 12,500 pounds maximum certificated takeoff weight means damage or structural failure which adversely affects the structural strength, performance, or flight characteristics of the aircraft, and which would normally require major repairs or replacement of the affected component.
- (2) Engine failure, damage limited to an engine, bent fairings or cowling, dented skin, small punctured holes in the skin or fabric, taxiing damage to propeller blades, damage to tires, engine accessories, brakes or wingtips are not considered "substantial damage" for the purpose of this part.

The amendment, however, changed the definition of substantial damage. Effective January 1, 1968, the definition of substantial damage was changed to read:

- (1) Except as provided in subparagraph (2) of this paragraph, substantial damage means damage or structural failure which adversely affects the structural strength, performance, or flight

## EXPLANATORY NOTES

### GENERAL AVIATION

General Aviation refers to the operation of U. S. Civil Aircraft owned and operated by persons, corporations, etc., other than those engaged in air carrier operations authorized by a certificate of public convenience and necessity, issued by the Civil Aeronautics Board.

### AIRCRAFT ACCIDENT

The accidents included herein are the occurrences incident to flight in which, "as a result of the operation of an aircraft, any person (occupant or nonoccupant) receives fatal or serious injury or any aircraft receives substantial damage." The total number of accidents shown in this publication should not be compared with the total number of accidents for any year prior to 1968. This is because of the effect of an amendment to Section 430.2 of Part 430 of the National Transportation Safety Board's Regulations, effective January 1, 1968. The change which influenced the decrease in the number of total accidents was to "substantial damage" to aircraft of 12,500 pounds maximum certificated takeoff weight or less, as follows:

Prior to January 1, 1968, the definition of substantial damage was:

(1) Except as provided in subparagraph (2) of this paragraph:  
(i) Substantial damage in aircraft of 12,500 pounds maximum certificated takeoff weight or less means damage or structural failure reasonably estimated to cost \$300 or more to repair.

(ii) Substantial damage in aircraft of more than 12,500 pounds maximum certificated takeoff weight means damage or structural failure which adversely affects the structural strength, performance, or flight characteristics of the aircraft, and which would normally require major repairs or replacement of the affected component.

(2) Engine failure, damage limited to an engine, bent fairings or cowling, dented skin, small punctured holes in the skin or fabric, taxiing damage to propeller blades, damage to tires, engine accessories, brakes or wingtips are not considered "substantial damage" for the purpose of this part.

The amendment, however, changed the definition of substantial damage. Effective January 1, 1968, the definition of substantial damage was changed to read:

(1) Except as provided in subparagraph (2) of this paragraph, substantial damage means damage or structural failure which adversely affects the structural strength, performance, or flight

EXPLANATORY NOTES

4. Miscellaneous Flying

Includes other kinds of flying not covered under the other three broad categories. In some instances the criterion of direct financial return may or may not be present.

ABBRE  
AIRCI  
SFV  
LFI  
RO

COLLISIONS BETWEEN AIRCRAFT

Collisions between aircraft are so classified only when both aircraft are occupied. This includes collisions wherein both aircraft are airborne (midair); one is airborne, the other on the ground; and both are on the ground. A collision with a parked, unoccupied aircraft is classified under the broad category of collision with objects (parked, unoccupied aircraft).

SE  
ME

CAUSE AND RELATED FACTORS

In determining the probable cause of an accident, all facts, conditions and circumstances are considered. For statistical purposes, where two or more causes exist in an accident, each is recorded and no attempt is made to establish a primary cause. Therefore, in the Cause and Related Factor Table, the figures shown in the columns dealing with Cause will exceed the total number of accidents. The term Factor is used, in general, to reflect those elements of an accident which further explain or supplement the probable cause (s). This provision was incorporated in the coding system to increase its flexibility and to provide a means for collecting essential items of information which could not be readily categorized elsewhere in the system. The number of total accidents and fatal accidents shown in the different Cause/Factor Tables may not agree with the number of total accidents or fatal accidents in other tables covering the same basic aircraft category or operational segment of General Aviation. This is due to the fact that certain numbers of these accidents are still under investigation and no cause determination could be made by the Safety Board. They were not, therefore, included in the Cause/Factor Tables.

SMALL FIXED-WING AIRCRAFT

Aircraft which have a certificated maximum gross takeoff weight of 12,500 pounds, or less.

LARGE FIXED-WING AIRCRAFT

Aircraft which have a certificated maximum gross takeoff weight in excess of 12,500 pounds.

ROTORCRAFT

Aircraft which in all usual flight attitudes are supported in the air wholly or in part by a rotor or rotors, i.e., by airfoils rotating or revolving about an axis.

a/ Excludes 3 U. S. Air Carrier aircraft, 3 military aircraft, and 2 foreign aircraft involved in collisions.  
 b/ Source: FAA  
 c/ Includes 3 accidents by air taxi operators during ferry to or from an air taxi (FAR, Part 135) operation.  
 d/ One suicide/sabotage accident is included in all computations except rates.

DIRECT ENTRY CAUSES

MISC-STRUCK LARGE DOG JUST PRIOR TO LIFTOFF.  
 PILOT-FLEW INTO FORECAST ICING CONDITIONS.  
 PILOT-LANDED ON DRY RUNWAY WITH SKIS EXTENDED.  
 PWR PLT-DEFECTIVE FUEL PUMP DIAPHRAGM.  
 PILOT-DELAYED ATTEMPT TO LIFTOFF TO REGAIN CONTROL  
 PILOT-POOR TECHNIQUE OR LACK OF KNOWLEDGE-SPIN RCVR  
 PWR PLT-PROP CYLINDER ATTACH SCREWS P/N A-1635-43.  
 PERSONNEL-PAX SLIPPED ON WET FLOAT.  
 PILOT-INADVERTENTLY LOWERED LDG GEAR.  
 MISC-DOG RAN IN FRONT OF ACFT.  
 ROTORCFT-ACFT IN SETTLING WITH POWER CONDITION.  
 PERSONNEL-INSTR, AS PX, INTERFERED WITH CONTROLS.  
 ROTORCFT-SUDDEN DISSYMMETRY OF LIFT.  
 ROTORCFT-ENTERED SETTLING WITH POWER CONDITION.  
 ROTORCFT-TAIL ROTOR GRIP RETAINING BOLT.  
 PWR PLT-GASKET BLOWN NO 3 CYL.  
 PILOT-MISCALCULATED FUEL CONSUMPTION.  
 PILOT-HOVERED OVER UNFAMILIAR AREA AT NIGHT.  
 ROTORCFT-REAR FLOAT CROSS TUBE FAILED IN FATIGUE.  
 PWR PLT-LOOSE ROD CAP BOLTS ON NO 4 ROD FAILED.

## DIRECT ENTRY CAUSES (CONTINUED)

MISC-DEER RAN ACROSS RWY STRIKING ACFT.  
MISC-LOSS OF CONTROL FOR UNDETERMINED CAUSE.  
ROTORCFT-ROTOR RPM LOST, CAUSE UNDETERMINED.  
PWR PLT-FUEL PRESSURE DROPPED TO ZERO, CAUSE UNDETERMINED.  
MISC-DEER CROSSED IN FRONT OF ACFT.  
LOG GR-BRAKES WEAK.  
PERSONNEL-PX DID NOT HAVE SEAT BELT TIGHT.  
PWR PLT-ENG ROUGH, BACKFIRING, ON FIRE, CAUSE UNDETERMINED.  
PERSONNEL-LOADER WALKED INTO ACFT PROPELLER.  
ROTORCFT-M/R NOT BALANCED CORDWISE DURING ASSEMBLY.  
SYSTEMS-L BRAKE FAILED, CAUSE UNDETERMINED.  
PERSONNEL-PAX INADVERTENTLY SHOT OUT RT JURY STRUT.  
PILOT-FAILED TO INSTR PX IN PROPER APPROACH TO ACFT.  
MISC-TYPE OF TURBULENCE UNDETERMINED.  
PILOT-INITIATED NIGHT FLIGHT IN ADVERSE WEATHER.  
PILOT-DID NOT MONITOR REAR ENG INSTRUMENTS.  
PWR PLT-IMPROPERLY INSTALLED COUNTERWEIGHT PINS.  
EQUIP-TOW HOOK RELEASED, CAUSE UNDETERMINED.  
PILOT-NEGLIGENT AND RECKLESS FLYING.

DIRECT ENTRY CAUSES ARE CARRIED UNDER THEIR APPROPRIATE  
CAUSAL CATEGORIES AND ARE INCLUDED IN THE TOTALS
